

Polarisation Maintaining Components Applications Note 1:

FPU series PM Low Ratio Tap

PM Low Ratio Tap – Slow Axis System Use

The most common PM Optical systems operate with light polarised to the slow axis. To use a SIFAM Fibre Optics Ltd PM LRT component in a slow axis aligned system please follow the diagram below:

Polarised light
aligned to the Slow
axis

Polarised light
aligned to the Fast
axis

If you require any further information including technical and qualification data about these, or any other SIFAM Fibre Optics components, please contact the SIFAM Fibre Optics Sales Team.
